

VCUHS Child Neurology Residency Assessment Policy

The Department of Neurology follows the Virginia Commonwealth University Health System (VCUHS) policy on assessment of housestaff. Further specifics are documented below:

Following each rotation, a written evaluation is completed by the responsible attending utilizing the New Innovations online residency management suite. Residents are evaluated on patient care, medical knowledge, interpersonal and communication skills, professionalism, practice-based learning and improvement, systems-based practice, clinical judgment, medical knowledge, clinical skills, medical care, humanistic attributes, attitudes and professional behavior, teaching and interest in continuing medical education. An overall performance grade is given to the resident for each rotation. Each resident can access their evaluations through the New Innovations online residency suite. Alternatively each resident has access to his/her evaluations which are compiled in the resident's file. These are reviewed by his/her advisor at least twice yearly with the residents in meetings with the advisor. The residents meet with the program director twice annually to review overall progress, address problems and plan for their future careers. Any serious problem is dealt with immediately by the supervising attending and the program director.

David J. Leszczyszyn, M.D., Ph.D.
Director, Child Neurology Residency Program
